

Domestic DIY Reduce Flushing

Don't use the toilet as a trash can. Dispose of tissues, cotton swabs and dental floss in the trash, you'll save water and also prevent clogs. Consider replacing toilets with dual-flush models, which use less water depending on the contents being disposed.

Drop a brick in the flush tank

An alternative to reduce the flush water is to drop a brick/filled bottle in the flush tank, which will reduce the total quantity of water in the tank. More information :[Here](#)
