

## Factors that Influence Domestic Water Requirement

Depending upon certain factors, per capita demand for a place may be as low as 75 LPCD to as high as 500 to 600 LPCD. Factors, which affect per capita requirement, are as below:-

Factors	Water Requirement	
	More Water	Lesser Water
Climatic Condition		
Status and Habits of Residents		
Availability of Sewer		
Water Rate		
Type of Water Supply
